Dear Hiring Manager,

I am writing to express my interest in the Junior Software Application Developer position at Revcor, Inc. With four years of experience as a Frontend Developer, Associate Web Developer, and small business owner, I have built a strong foundation in modern web technologies and user-centric design. I'm now excited to transition into a more systems-oriented role involving C++, Python, and LabVIEW.

Although my primary focus has been frontend development, I've also designed and built embedded projects using C/C++, Python, Arduinos, Raspberry Pis, and microcontrollers. These hands-on experiences have sparked a growing passion for low-level programming and systems integration. While I haven't yet worked with LabVIEW professionally, I am eager to learn and confident in my ability to adapt quickly. I also regularly use AI tools to accelerate problem-solving, explore architectural ideas, and improve development workflows—helping me move faster while maintaining high-quality output.

I bring to the table:

- A strong foundation in frontend engineering, with practical experience and a growing proficiency in C++ and Python.

- A proven ability to support and collaborate across technical teams and stakeholders, balancing performance with usability.

- A commitment to learning, including the use of AI to enhance productivity, streamline development, and deepen my understanding of new technologies.

I would welcome the opportunity to contribute to Revcor, Inc.'s innovative team while continuing to grow in new technical areas. Thank you for considering my application—I look forward to the possibility of speaking further.

Thank you,

Kenneth Zimny
